

APPENDIX C

Recycled Organic Value Adding Services

SERVICE	DEFINITION
Transport and delivery	Movement of RO products from the point of production to where they are used
Bagging	Packaging RO products in bags to facilitate ease of transport and handling, particularly for when selling to the general public
Pelletising	Drying and compression of compost into pellets to facilitate transport and application, particularly in agricultural markets
Spreading and Top Dressing	Mechanical spreading of RO products to meet the specific needs of plants or soil
Express blowing	Pumping/blowing of RO products from a truck or heap via a hose to the point where they need to be applied
Soil Injection	Direct injection of liquid RO products into the top layers of the soil using purpose designed equipment
Installation as a filter media	Placement of RO products in a purpose designed system that allows water or air to be pumped through the product thus removing pollution from the water or air
Installation as an erosion control device	Placement of RO products on slopes to facilitate revegetation and reduce high velocity run-off and erosion
Advisory and training services	Transfer of knowledge regarding RO products production, benefits and use in order to increase their value and effectiveness
